

# „Diplomat Connect App“ heralds a new era in dental offices.

Work faster and more efficiently with the new app  
and control unit from Diplomat Dental

Piešťany, 01.10.2019. After comprehensive preparation and development, the wait is over: as of today, Diplomat Dental's innovative Dental Connect app is available through our international network of dealers in more than 50 countries. Together with a completely renewed, user-friendly control unit, it combines all the possibilities of today's digital innovations in a single technology designed for dental practice. It ensures a faster and more flexible workflow, is intuitive to use and guarantees a high performance thanks to remote maintenance and live support.

**Digitise your practice.** The app works on all major operating systems (iOS and Android) and in dental offices of all sizes. Thanks to its sophisticated technology, it is a particularly ideal solution for joint offices with multi-user solutions or larger clinics. For example, each user can create their own individual profile, save their personal settings and easily transfer them to other dental units. Due to the high level of compatibility, you can even also use your own, private tablet to operate the system. Among the most important advantages of this novel digital product are more time, less stress and clearly optimised work processes.

**Dentistry 4.0.** The control unit has also been overhauled and is state-of-the-art in terms of its design and functionalities. The touch screen is both intuitive and user-friendly at the same time, and it virtually controls all settings of the dental unit, such as the position of the chair, lighting settings, water temperature in the cups, etc. This digital improvement has a direct effect on the doctor-patient relationship. Diplomat Dental CEO, Tomas Nerad, is convinced that “through an optimised workflow, the dentist can concentrate fully on his patient or treatment. In addition, it is possible for the patient to follow complicated treatment

procedures directly on a TV or the tablet screen.”

Nerad also outlined another advantage: “The app can be conveniently controlled via Remote Diagnostics and can be updated remotely. In this way, a service engineer receives real-time information about problems, and can therefore act quickly to find solutions.”

“The app and the control unit mark an important milestone for Diplomat Dental, enabling us to offer our customers and partners the best possible quality and functionalities in the digital age with all its tectonic upheavals,” said Nerad.

**We produce values.** Diplomat Dental has been one of the leading manufacturers of dental treatment units for more than 60 years. The company stands for innovative solutions with the highest comfort and quality standards for its customers.
